

# Customer Experiences with Glucose Stabiliser: Reduced Appetite, Balanced Blood Sugar, and Less Bloating

SIGRID's Glucose Stabiliser, powered by the patented SiPore® technology, has demonstrated significant benefits in managing blood sugar levels, reducing cravings, and alleviating bloating among its users. A recent customer survey conducted with 152 participants who have used Glucose Stabiliser for at least one month reveals compelling insights into the product's effectiveness.

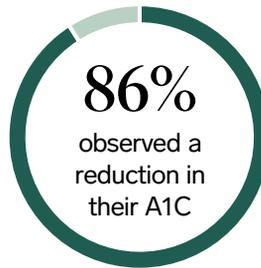

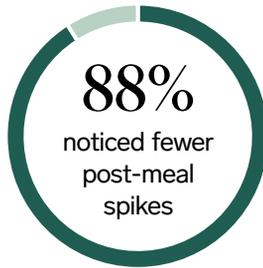

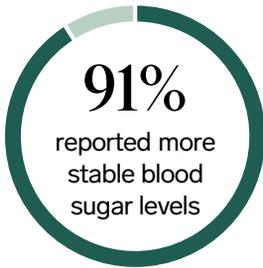

**Recommended intake**  
Two capsules, twice a day with lunch, dinner, or your two biggest meals.

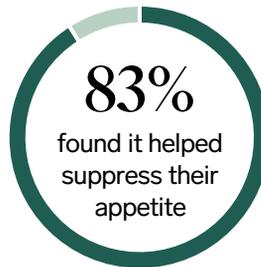

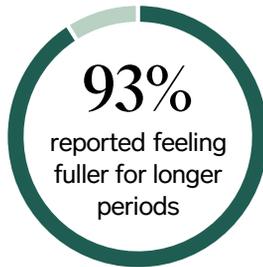

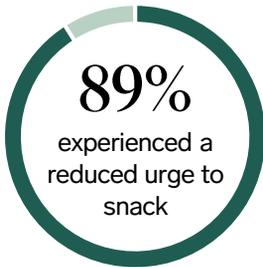

## Blood Sugar Management

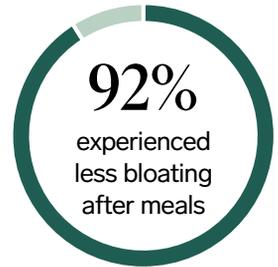

Of those who measured their long-term blood sugar levels (A1C):

## Satiety and Appetite Control

## Bloating

## Patented SiPore® Technology

Proven safety and efficacy in 3 clinical trials  
8 publications in peer-reviewed journals

The exclusive ingredient in Glucose Stabiliser is our all-natural SiPore® mineral, backed by more than 13 years of research in Sweden. The mineral acts locally in the gut and exits the body naturally.

### Traps Enzymes

The SiPore® mineral catches some of the enzymes responsible for breaking down the carbs and fat in your food.

### Slows Digestion

It makes your body process sugar and fat more slowly and minimizes the amount that enters your bloodstream.

### Stabilizes Blood Sugar

By slowing the digestion process, SiPore® helps to prevent rapid blood sugar spikes, promoting more stable glucose levels and less urge to snack in-between meals.
